

Grinder for Lumps/Purge

LG-Series

Tough, heavy duty central grinder/granulator
High performance granulators for heavy parts and high throughput

LG-Series

The LG- series grinder/granulators enable gentle and thorough granulation of thick-walled mouldings, sheets, sprue cakes, pipes and profiles, etc, on account of the extremely high stability of the entire machine housing and through the high moment of gyration of the massive rotor that is made from one solid piece of metal. Voluminous and large surface area plastic parts such as bumpers from the automotive industry or parts dismantled from old cars, plastic tanks, door interior claddings, etc can also be granulated.

A special rotor enables single stage granulation of even extremely massive lumps from production start-ups.

Application:

Lumps

Pipes

Profiles
